FUND FOR MARTYR, WOUNDED, POW & MISSING IN ACTION

Design and Development of the Internal Portal

A unified internal portal was designed and developed to centralize HR and helpdesk services for over 400 employees. The portal was built on SharePoint Subscription Edition and fully integrated with ERP Oracle Cloud to automate workflows and improve internal communication. Delivered within a strict 8-week timeline, the platform provided a secure, user-friendly hub that significantly reduced processing times and boosted employee satisfaction.

- A centralized internal portal on SharePoint Subscription Edition combining HR, helpdesk, and employee services.
- Integration with ERP Oracle Cloud for seamless data synchronization and secure workflows.
- 12 core services are accessible through a Single Sign-On (SSO).
- Role-based access control to ensure secure handling of sensitive employee information.
- Automated workflows to reduce processing time and optimize internal operations.
- A 12-month technical support contract to maintain stability, security, and continuous improvements.

FUND FOR MARTYR, WOUNDED, POW & MISSING IN ACTION

Design and Development of the External Portal

A modern, responsive external portal was developed to strengthen public engagement and provide a professional digital presence for FFM. Built within 6 weeks and fully aligned with Digital Government Authority (DGA) standards, the portal delivered a unified design, improved accessibility for all users, and offered an organized structure for information and e-services. The platform achieved a 75% increase in monthly visitors and positioned FFM as a trusted government digital hub.

- Developed a responsive external portal with a unified design compliant with DGA standards.
- Organized content and e-services into a clear, user-friendly navigation structure.
- Implemented accessibility features meeting WCAG standards for special-needs users.
- Applied SEO optimization and analytics to boost visibility and track engagement.
- Completed the project in 6 weeks using an agile, iterative approach.
- Included a 12-month technical support contract for ongoing performance and enhancements.

TOURISM DEVELOPMENT FUND

Design and Development of the External Portal.

A modern, responsive external portal was developed on Umbraco CMS to strengthen public engagement and provide a professional digital presence for TDF. Built within 12 weeks and fully aligned with Digital Government Authority (DGA) standards, the portal delivered a unified design, improved accessibility for all users, and offered an organized structure for information and e-services. The platform achieved an 80% increase in monthly visitors and positioned TDF as a trusted government digital hub.

- Developed a responsive external portal on Umbraco CMS with a unified design compliant with DGA standards.
- Organized content and e-services into a clear, user-friendly navigation structure.
- Implemented accessibility features meeting WCAG standards for special-needs users.
- Applied SEO optimization and analytics to boost visibility and track engagement.
- Completed the project in 12 weeks using an agile, iterative approach.
- Included a 12-month technical support contract for ongoing performance and enhancements.

NATIONAL DEVELOPMENT FUND

Council and Committees Management System.

A comprehensive digital system was designed and developed to manage councils and committees, aiming to enhance decision-making, streamline workflows, and improve communication between secretaries, members, and administrators. The solution provided a secure, user-friendly platform that automated key processes and ensured transparency across all levels.

- Delivered a secure, integrated system to manage all council and committee activities in one platform.
- Developed an iOS tablet app enabling secretaries to create, edit, and share meeting minutes seamlessly.
- Implemented electronic approval and signature workflows to speed up decision-making and reduce manual work.
- Added real-time notifications via app, email, and SMS to ensure timely actions and responses.
- Built an internal web dashboard for administrators to manage users, permissions, and generate detailed reports.

NATIONAL DEVELOPMENT FUND

Developing the external portal for the National Development Fund based on a content and document management platform.

It provides an exceptional user experience that considers standard user expertise and supports seamless content delivery, enabling access to information and data with minimal steps.

- Content management & publishing on the portal.
- Media center for the fund.
- Information content categorization.
- Interactive services.

MINISTRY OF ECONOMY & PLANNING

Economy and Planning supports the presentation and indexing of portal content for users.

It also provides an advanced set of economic indicators and sophisticated reports all managed entirely through the portal's internal system.

- Advanced content management platform.
- Calculating statistical indicators.
- Content publishing workflow.
- Interactive services.
- Reports and libraries.
- Advanced search services.

GENERAL AUTHORITY FOR STATE REAL ESTATE

Developing both the internal and external portals for the Authority, where the external portal offers a range of informational, interactive, and service-oriented sections for external users.

The internal portal also provides several advanced features for employees within the Authority, including internal department sites and employee self-service capabilities.

- Human resources and employee's management.
- Self-service management.
- Task and project management.
- Libraries and documents management.

GULF MONETARY COUNCIL

Developing the Council's external and internal portal, including external services for those dealing with the Fund, recruitment management, and tender management, in addition to employee self-services, and through an internal portal that supports integration with the Council's internal systems.

- External gate.
- Supplier services.
- Employment services.
- Departmental sub-sites.
- Library management.
- Archiving documents.
- ChatGPT.
- Automation of employee services.

GENERAL AUTHORITY FOR COMPETITION

Developing the Authority's internal portal includes a group of sections related to internal employees, such as electronic services, document libraries, circulars, user files, employee directories, affiliated departments' websites, in addition to information services such as news, events, and communication between employees.

- Automation of employee services.
- Dynamic workflow engine.
- Integration with the Authority's internal systems.
- Content management system.
- Content publishing workflow.
- Internal gate.
- Training administration.
- Internal project management.
- Employee services management.

THE FINANCIAL ACADEMY

Developing a system for the Finance Academy, which includes academy services such as applicant tests and qualifications, registration in training programs, and integration with Jadara systems. The platform was developed based on a content management and documentation platform, along with an internal workflow system that allows internal staff to manage tasks, documents, user requests, and integration with internal systems.

- Management of training projects.
- Internal entitlement drive.
- Integration with internal and external systems.
- Automated workflow system.

The electronic portal for Saudi Automotive Services Company (SASCO) enables users to access and review the company's content and services. The portal also offers investment opportunities for entrepreneurs interested in partnering with the company and details all the programs available to users and investors. Additionally, users can perform geographical searches to locate the nearest branch or Centre of the company.

- Advanced content management platform.
- Investment management.
- Managing communication channels.
- Managing electronic services.
- Integration with branch geolocation system.

SAUDI AUTOMOBILE CLUB COMPANY

The Saudi Automobile Club (SATA) is responsible for issuing international customs transit books, triptych books, and others.

Through this project, a system was developed to automate the issuance and management of international books and licenses.

- Management of triptych books, TIR and international licenses.
- Customs claims and clearance for books.
- Dynamic workflow.
- Multiple notification channels.
- Integration with Zakat and Income.

SAUDI CENTER FOR STRATEGIC PARTNERSHIPS

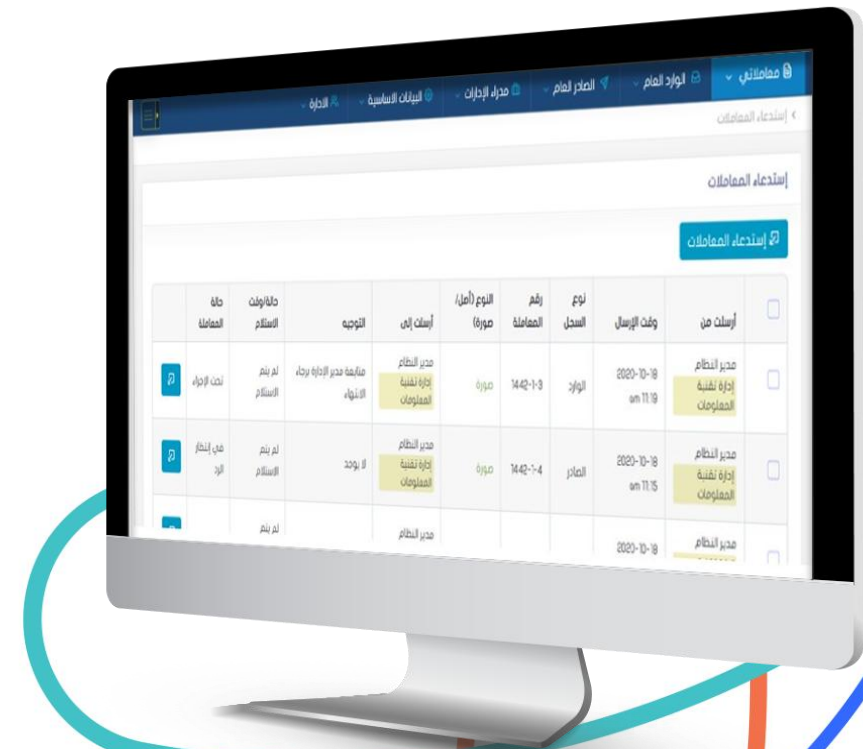

الشراكات الاستراتيجية
STRATEGIC PARTNERSHIPS

Developing a system for the Finance Academy, which includes academy services such as applicant tests and qualifications, registration in training programs, and integration with Jadara Systems.

The platform was developed based on a content management and documentation platform, along with an internal workflow system that allows internal staff to manage tasks, documents, user requests, and integration with internal systems.

- Management of training projects.
- Internal entitlement drive.
- Integration with internal and external systems.
- Automated workflow system.

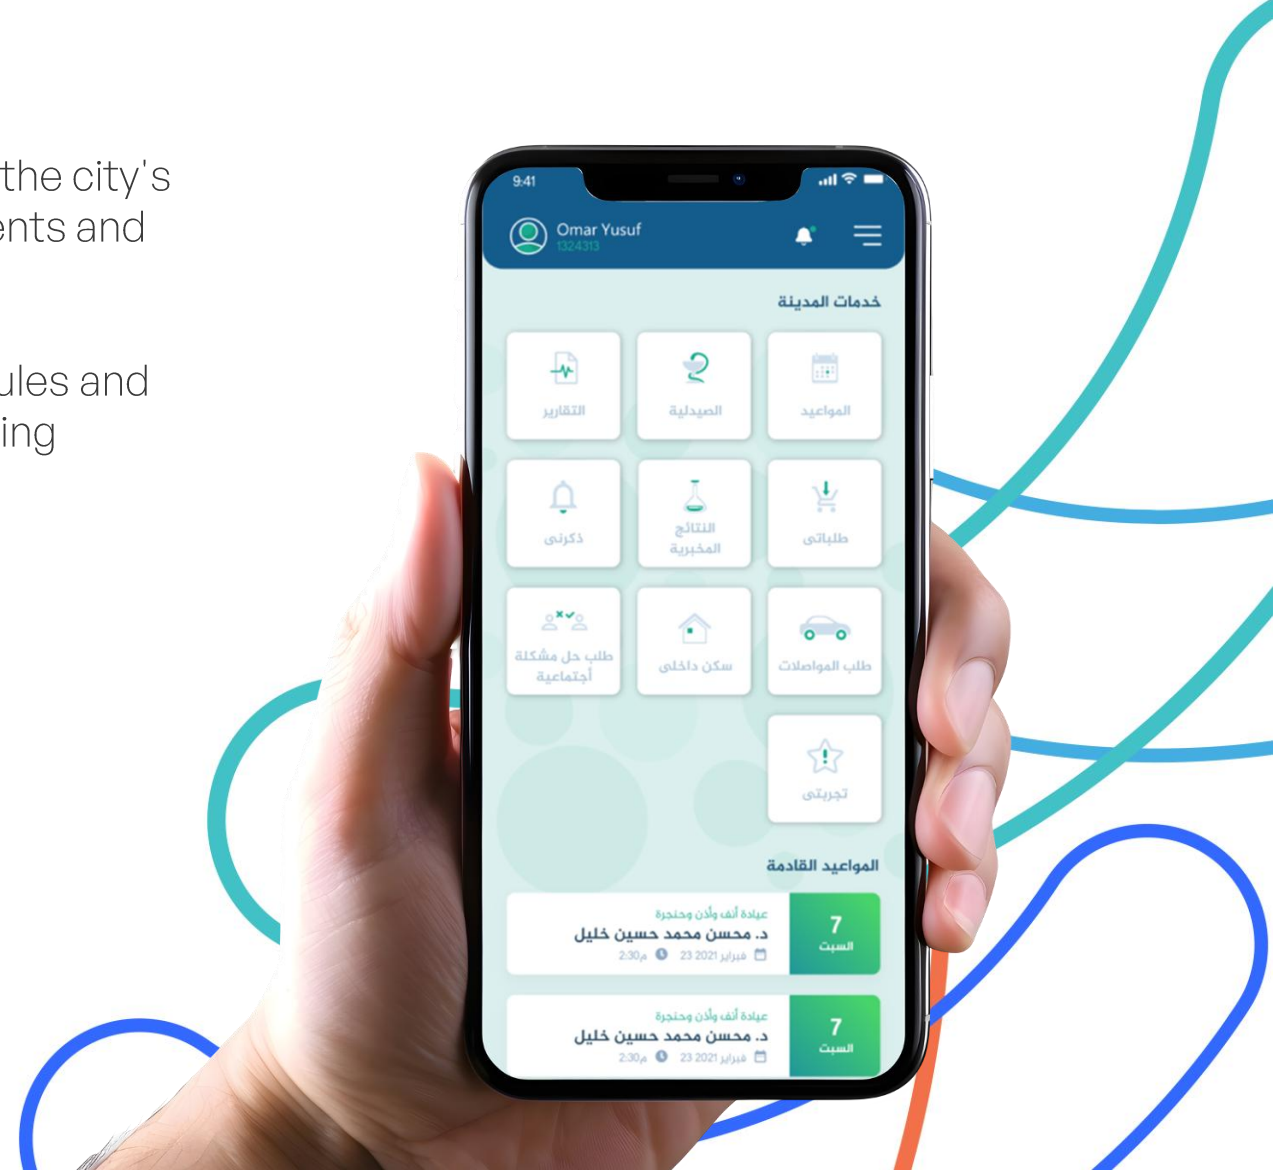

KING ABDULLAH MEDICAL CITY

Development, Design, and Deployment of “Manarat Al-Seha” Application that offers a comprehensive range of services to the city's patients, facilitating seamless communication between patients and hospital management.

Providing supplementary services such as medication schedules and detailed reports, with the objective of expediting and simplifying processes for both patients and hospital administration

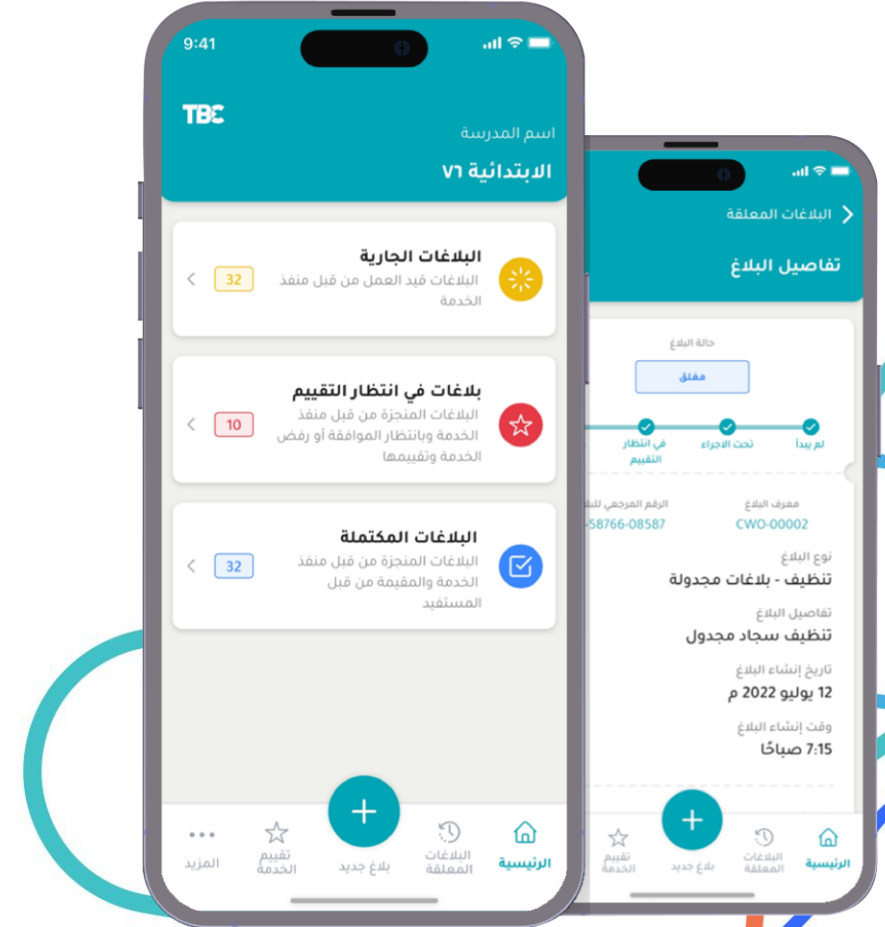

- Appointment and scheduling management.
- Integration with internal systems.
- Feedback and evaluation management.
- Dynamic reporting.
- Support for various operating systems.
- Multi-channel notification channels.

Registered users in the system can submit electronic reports and track workflow progress through the company's automated reporting system.

The application supports various smartphone systems and integrates with both internal company systems and external services.

- Reports management.
- Advanced complaints system.
- Reports and complaints workflow system.
- Risk Management.

THE NATIONAL SECURITY SERVICES COMPANY

The system helps the National Security Services Company (SAFE) recruit qualified security guards who go through an automated workflow system with different qualification steps.

The system provides several integrated modules, including the medical and physical examination, through the merit verification engine, to ensure that the appropriate candidate is selected for the institutions.

- Human Resource Management.
- Security project management.
- Recruitment management.
- Merit verification engine.
- Shift management.

BANKRUPTCY COMMISSION

The project aims to:

Continuously enhance internal communication between the committee's employees.

Raise employee awareness, enhance work values, and publish notices and announcements.

Inform employees of what is published about the committee in the media and social media.

Improve the committee's internal environment and raise its quality.
